

Professional Profile

Developed the server and frontend of credit process automation applications (server side with Java)
Described and reviewed designs of large parts of the application.
Conducted full refactoring cycle: architectural approach change, design, task decomposition, approach implementation, as well as help and mentorship to other developers who participated in refactoring.
Test coverage and delivery of the application to bank stands.

Certificates

- Java SE 11 developer (1ZO-819)

Core Skills

- Java
- Spring
- React/Redux/TypeScript
- Git
- Kafka
- Unix
- Docker/Openshift/k8s (include service mesh)

Career Summary

Mar 2019 - Present

Lanit BPM, Moscow
Java Developer

Outline

Developed different parts of the process: integration/UI. Participated in the development and coordination of microservices architecture. Responsible for DevOps (setting up the environment, configurations, pipelines, service mesh). Led and covered development with tests. Reviewed other team members. Dealt with problems of supplying the developed application to bank stands.

Key Responsibilities

- Developed the architecture of microservices
- Develop microservices application (spring+kafka+environment and supply settings)
- Review other team members
- Test coverage of application
- Fixing application defects

Key Achievements

- Refactoring a large part of the project: the loading speed of the user portal decreased from 1.5 minutes to about 6 seconds

Education

- **Bachelor's degree** | Moscow Aviation Institute | Sep 2013 - Jun 2017 | Applied math (probability theory)
- **Master's degree** | Higher School of Economics (HSE) | Sep 2019 - Jun 2021 | Math department. Worked on the problem of determining sampling geometry, source code: https://github.com/shlyapugin-anton/masters_hse

Additional

Programming Languages

Java (senior), Python (middle, numpy/scipy/Django),
Javascript/React (middle)

Languages

- English (C1)
- Finnish (A1)
